Since there will be no fill placed to exceed existing elevations, all temporary obstructions will be removed upon completion of construction, and existing surfaces will be returned to pre-project conditions, there will be no increase in 100-year flood elevations in Bluestone Creek upon completion of the project.

A Project Location map, Flood Hazard map, and Floodplain Project map for this project have been included with the enclosed permit application. The Flood Hazard and Floodplain Project maps show the approximate location of the flood plain relative to the Project area. Also enclosed is a check (No. 166) in the amount of \$500.00 for the permit application fee.

**Floodplain Development Permit Application
Dominion Transmission, Inc.
H-152 Pipeline Replacement
Doddridge County, West Virginia**

Dear Mr. Sandora:

GAI Consultants, Inc. (GAI), on behalf of Dominion Transmission, Inc. (Dominion), is pleased to submit this cover letter with the enclosed Doddridge County Floodplain Development Permit Application for the proposed H-152 Pipeline Replacement Project (Project) located in Doddridge County, West Virginia.

The Project includes the installation of approximately 240 linear feet (LF) of 10-inch diameter plastic natural gas pipeline within a 25-foot right-of-way.

Flood Insurance Rate Map information (FIRM Panel 54017C0120C) obtained from the Federal Emergency Management Agency (FEMA) shows that portions of the project area are within FEMA Flood Zone – A. The Zone A designation indicates that a location is within the area subject to a one percent annual chance flood event (100-year flood or Base Flood), but the Base Flood Elevations have not been determined. The limits of the floodplain in this zone are approximate. Approximately 240 LF of the proposed pipeline is located within the approximate Zone A. The proposed pipeline that will be situated within Zone A will cross Bluestone Creek at a location approximately 630 LF to the west of State Route 18, approximately 1.5 miles southeast of the intersection of State Route 18 and US-50. This stream is a perennial stream with a bank to bank width at the crossing location of approximately 18 feet. The pipeline will also cross two (2) Unnamed Tributaries to Bluestone Creek within Zone A. One Unnamed Tributary to Bluestone Creek is an intermittent stream with a bank to bank width at the crossing location of approximately 4 feet. The other is an ephemeral stream with a bank to bank width at the crossing location of approximately 4 feet. The pump around or flume pipe methods will be used to divert water around construction activities in the perennial and intermittent streams. The streams will be restored to pre-construction stream channel dimensions and the banks will be stabilized prior to removal of the water diversion measures. The ephemeral stream crossing will be constructed and the stream restored within 24 hours.

Construction activities will include the installation of the underground pipeline using open ditch techniques, waterbars for surface water control, trench plugs for open trench water control, and trench breakers for subsurface water control following pipeline installation. Following installation of the pipeline, the trench will be backfilled and compacted to approximate original contours and the area will be returned to approximate original surface conditions with no permanent above ground structures. No access road construction is proposed as all access roads are existing. Any excess material will be placed outside of the floodplain area. Any fill placed within the limits of the floodplain shall not exceed the original elevations.
