Commercial/Industrial Floodplain Development Permit

Doddridge County, WV Floodplain Management

This permit has been issued to **Dominion Transmission, Inc.** and is for the approved commercial and/or industrial development project associated with this permit that impacts the FEMA-designated floodplain and/or floodway of Doddridge County, WV, pursuant to the rules and regulations established by all applicable Federal, State and local laws and ordinances, including the Doddridge County Floodplain Ordinance. This permit must be posted at the site of work as to be clearly visible, and must remain posted during entirety of development.

Permit #:15-361

Date Approved: 07/20/2015 **Expires: 07/20/2016**

Issued to: Dominion Transmission, Inc. **POC: Robert Jennings (804) 273-3737**

Company Address: 5000 Dominion Blvd., Glen Allen, VA 23060

Project Address: South F ork of Hughes River, (CR 40)

Firm: 225C **Lat/Long: 39.1797950367N/80.7624598038W**

Purpose of development: New building

Issued by: George C. Eidel, Doddridge County FPM (*or designee*)

Date: 20 July, 2015

For additional information regarding this permit, please contact Doddridge County Floodplain Manager at 304.873.2631, or via email at doddridgecountyfpm@gmail.com
118 East Court Street; West Union, WV 26456

SENDER: COMPLETE THIS SECTION

- Complete items 1, 2, and 3. Also complete item 4 if Restricted Delivery is desired.
- Print your name and address on the reverse so that we can return the card to you.
- Attach this card to the back of the mailpiece, or on the front if space permits.

Floodplain Permit Application

Please take notice that on the 1st day of June, 2015

Dominion Transmission, Inc.

filed an application for a Floodplain Permit to develop land located at or about:

Southwest District

39.1797950367N/80.7624598038W

Permit #15-361 2015 Maxwell Compressor Station – New Building

The Application is on file with the Clerk of the County Court and may be inspected or copied during regular business hours. Any interested persons who desire to comment shall present the same in writing by **July 06 , 2015,** delivered to:

Clerk of the County Court

118 E. Court Street, West Union, WV 26456

Beth A Rogers, Doddridge County Clerk

Edwin L. "Bo" Wriston. Doddridge County Flood Plain Manager

RE: ***Flood Plain Development Permit Application***
Dominion Transmission, Inc.
2015 Maxwell Compressor Station – New Building
Southwest District, Doddridge County, West Virginia

Dear Mr. Wriston:

Dominion Transmission, Inc. (DTI) has enclosed for your review the Doddridge County Flood Plain Permit Application for the 2015 Maxwell Compressor Station – New Building (Project) in Southwest District, Doddridge County, West Virginia, with applicable $1,730.00[1] fee made payable to the Doddridge County Commission (Enclosure 1).

DTI is planning to construct one (1) new compressor station building within the existing graveled and fenced lot of the Maxwell Compressor Station. The new building is needed in order for DTI to house a new compressor engine. The building will be located near GPS coordinates 39.1797950367, -80.7624598038, off of South Fork of Hughes River Road (CR 40) in West Union, West Virginia, 26456.

The new building will be constructed with the FEMA-mapped 100-year floodplain of the South Fork Hughes River. The building will be approximately 42-foot wide by 42-foot long by 30-foot high. The building will be constructed of steel and will be on a poured concrete pad that will be five (5)-feet deep.

As listed in Section 6 – As Built Elevations, elevations will be provided to the County at the completion of the construction activities.

---

[1] The fee was calculated based on the total construction costs of $245,055.00.
$1,000.00 base fee + $5.00 * $146,000.00 = $1,730.00.

If you have any questions concerning the application or need additional information, please contact Robert Jennings at (804) 273-3737 or Robert.H.Jennings@dom.com. Please direct your response to:

DESCRIPTION OF WORK (CHECK ALL APPLICABLE BOXES)

A. STRUCTURAL DEVELOPMENT

ACTIVITY		STRUCTURAL TYPE	
[X]	***New Structure***	[]	Residential (1 – 4 Family)
[]	Addition	[]	Residential (more than 4 Family)
[]	Alteration	[]	Non-residential (floodproofing)
[]	Relocation	[]	Combined Use (res. & com.)
[]	Demolition	[]	Replacement
[]	Manufactured/Mobil Home	[X]	***Industrial (Compressor Station Building)***

B. OTHER DEVELOPMENT ACTIVITIES:

[] Fill [] Mining [] Drilling [] Pipelining

[X] ***Grading***
[] Excavation (except for STRUCTURAL DEVELOPMENT checked above)
[] Watercourse Alteration (including dredging and channel modification)
[] Drainage Improvements (including culvert work)
[] Road, Street, or Bridge Construction
[] Subdivision (including new expansion)
[] Individual Water or Sewer System
[] Other (please specify)

C. STANDARD SITE PLAN OR SKETCH

1. SUBMIT ALL STANDARD SITE PLANS, IF ANY HAVE BEEN PREPARED (ENGINEERING PLANS MUST BE SIGNED AND SEALED).
2. IF STANDARD SITE PLANS HAVE NOT BEEN PREPARED:
   SKETCH ON A SEPARATE 8 ½ X 11 INCH SHEET OF PAPER THE SHAPE AND LOCATION OF THE LOT. SHOW THE LOCATION OF THE INTENDED CONSTRUCTION OR LAND USE INDICATING BUILDING SETBACKS, SIZE & HEIGHT. IDENTIFY EXISTING BUILDINGS, STRUCTURES OR LAND USES ON THE PROPERTY.
3. SIGN AND DATE THE SKETCH.

ACTUAL TOTAL CONSTRUCTION COSTS OF THE COMPLETE DEVELOPMENT/ PROPOSED CONSTRUCTION PROJECT WITHIN THE FLOODPLAIN $ 245,055.00

D. ADJACENT AND/OR AFFECTED LANDOWNERS:

1. NAME AND ADDRESS OF ALL OWNERS OF SURFACE TRACTS ADJACENT TO THE AREA OF THE SURFACE TRACT (UP & DOWN STREAM) UPON WHICH THE PROPOSED ACTIVITY WILL OCCUR AND ALL OTHER SURFACE OWNERS UP & DOWN STREAM) WHO OWN PROPERTY THAT MAY BE AFFECTED BY FLOODING AS IS DEMONSTRATED BY A FLOODPLAIN STUDY OR SURVEY (IF ONE HAS BEEN COMPLETED).

NAME: I.L (Ike) Morris **ADDRESS:** P.O. Box 397, Glenville, WV 26351

2. NAME AND ADDRESS OF AT LEAST ONE ADULT RESIDING IN EACH RESIDENCE LOCATED UPON ANY ADJACENT PROPERTY AT THE TIME THE FLOODPLAIN PERMIT APPLICATION IS FILED AND THE NAME AND ADDRESS OF AT LEAST ONE ADULT RESIDING IN ANY HOME ON ANY PROPERTY THAT MAY BE AFFECTED BY FLOODING AS IS DEMONSTRATED BY A FLOODPLAIN STUDY OR SURVEY.

NAME: Same as Above
ADDRESS: _____

NAME: _____
ADDRESS: _____

E. CONFIRMATION FORM

THE APPLICANT ACKNOWLEDGES, AGREES, AND CONFIRMS THAT HE/IT WILL PAY WITHIN 30 DAYS OF RECEIPT OF INVOICE BY THE COUNTY FOR ALL EXPENSES RELATIVE TO THE PERMIT APPLICATION PROCESS GREATER THAN THE REQUIRED DEPOSIT FOR EXPENSES INCLUDING:

(A) PERSONAL SERVICE OF PROCESS BY THE DODDRIDGE COUNTY SHERIFF AT THE RATES PERMITTED BY LAW FOR SUCH SERVICE.
(B) SERVICE BY CERTIFIED MAIL RETURN RECEIPT REQUESTED.
(C) PUBLICATION.
(D) COURT REPORTING SERVICES AT ANY HEARINGS REQUESTED BY THE APPLICANT.
(E) CONSULTANTS AND/OR HEARING EXPERTS UTILIZED BY DODDRIDGE COUNTY FLOODPLAIN ADMINISTRATOR/MANAGER OR FLOODPLAIN APPEALS BOARD FOR REVIEW OF MATERIALS AND/OR TESTIMONY REGARDING THE EFFICACY OF GRANTING OR DENYING THE APPLICANT'S FLOODPLAIN PERMIT.

NAME (PRINT): Cristie D. Neller

SIGNATURE: Cristie D. Neller DATE: 5-20-15

After completing SECTION 2, APPLICANT should submit form and fees to Clerk of Doddridge County Court or his/her representative for review.

SECTION 3: FLOODPLAIN DETERMINATION (to be completed by Floodplain Administrator/Manager or his/her representative)

THE PROPOSED DEVELOPMENT:

THE PROPOSED DEVELOPMENT IS LOCATED ON:
FIRM Panel:______________________________
Dated:______________________________

[] Is NOT located in a Specific Flood Hazard Area (Notify applicant that the application review is complete and NO FLOOPLAIN DEVELOPMENT PERMIT IS REQUIRED).

[] Is located in Special Flood Hazard Area.
FIRM zone designation______________________
100-Year flood elevation is ______________NGVD .
Stream name ______________________.
Profile # ______________________.

[] Unavailable

[] The proposed development is located in a floodway.

[] See section 4 for additional instructions.

SIGNED______________________ DATE______________

SECTION 4: ADDITIONAL INFORMATION REQUIRED FOR DEVELOPMENT IN SPECIAL FLOOD HAZARD AREA (To be completed by Floodplain Administrator/Manager or his/her representative)

The applicant must submit the documents checked below before the application can be processed.

[] A plan showing the location of all existing structures, water bodies, adjacent roads and proposed development.

[] Development plans, drawn to scale, and specifications, including where applicable: details for anchoring structures, storage tanks, proposed elevation of lowest floor, (including basement or crawl space), types of water resistant materials used below the first floor, details of flood proofing of utilities located below the first floor and details of enclosures below the first floor. Also______________________________
____

[] Subdivision or other development plans (If the subdivision or development exceeds 10 lots or 2 acres, whichever is the lesser, the applicant must provide 100-year flood elevations if they are not otherwise available).

[] Plans showing the extent of watercourse relocation and/or landform alterations.

[] Top of new fill elevation _____Ft. NGVD.
For floodproofing structures applicant must attach certification from registered engineer or architect.

[] Certification from a registered engineer that the proposed activity in a regulatory floodway will not result in any increase in the height of the 100-year flood. A copy of all data and calculations supporting this finding must also be submitted.

[] Manufactured homes located in a Flood Hazard Area must have a West Virginia Contractor's License and a Manufactured Home Installation License as required by the Federal Emergency Management Agency (FEMA).

[] Other:_____

SECTION 5: PERMIT DETERMINATION (To be completed by Floodplain Administrator/Manager or his/her representative)

I have determined that the proposed activity (type is or is not) in conformance with provisions of the Floodplain Ordinance adopted by the County Commission of Doddridge County on May 21, 2013. The permit is issued subject to the conditions attached to and made part of this permit.

SIGNED_____DATE_____

If the Floodplain Administrator/Manager found that the above was not in conformance with the provisions of the Doddridge County Floodplain Ordinance and/or denied that application, the applicant may appeal.

APPEALS: Appealed to the County Commission of Doddridge County? [] Yes {} No
Hearing Date:_____
County Commission Decision - Approved [] Yes [] No

CONDITIONS:_____
_____
_____

SECTION 6: AS-BUILT ELEVATIONS (To be submitted by APPLICANT before Certificate of Compliance is issued). ***As-Build Elevations will be provided after the building has been constructed.***

The following information must be provided for project structures. This section must be completed by a registered professional engineer or a licensed land surveyor (or attach a certification to this application).

COMPLETE 1 OR 2 BELOW:

1 Actual (As-Built) Elevation of the top of the lowest floor (including basement or crawl space is _____FT. NGVD.

2 Actual (As Built) elevation of floodproofing is _____FT. NGVD.
Note: Any work performed prior to submittal of the above information is at risk of the applicant.

SECTION 7: COMPLIANCE ACTION (To be completed by the Floodplain Administrator/Manager or his/her representative).

The Floodplain Administrator/Manager or his/her representative will complete this section as applicable based on inspection of the project to ensure compliance with the Doddridge County Floodplain Ordinance.

Dominion Project 2015 Maxwell Compressor Station New Building

1 message

Edwin Wriston <doddridgecountyfpm@gmail.com> Fri, Jun 12, 2015 at 12:26 PM
To: Robert.H.Jennings@dom.com
Cc: brett slater <blslater.4774@yahoo.com>, Gregory Robinson <wvrobby@hughes.net>

Mr. Jennings,

The Dominion Project, 2015 Maxwell Compressor Station - New Building, submitted to the Doddridge County Floodplain Office will require both an H&H & HECRAS engineering study to be completed before any further action is taken.

The project as submitted is entirely in the FEMA designated 100-yr floodplain, and a building of the size and proportion proposed will have impact on the flow of water. H&H & HECRAS studies must therefore be completed to determine possible impacts both up and downstream.

Please submit your studies at your earliest convenience. Once received, your studies will be forwarded to an independent 3rd party engineering firm for review as per our normal procedures.

If you do not feel this can be completed in the 90-day window from the date of submission to our office, you may request an extension for the permitting process, or withdraw your current application until such time the H&H & HECRAS studies are completed.

Please note that we will also require all additional DEP, USACE, WVDNR permits, etc. needed for this project to be obtained and forwarded to us before a floodplain permit can be issued.

If you have any questions, please feel free to contact our office via email at your convenience.

Respectfully,

--

RE: Hydrologic & Hydraulic Engineering Analysis Report
Dominion Resources, Inc.
Maxwell Compressor Station New Building Project
Doddridge County, West Virginia

Dear Ms. Slater:

Dominion Transmission, Inc. (DTI) is pleased to submit the enclosed Hydrologic & Hydraulic (H&H) Engineering Analysis Report for the Maxwell Compressor Station New Building Project (Project) in Doddridge County, West Virginia (WV). The report includes the Hydrologic Engineering Centers River Analysis System (HEC-RAS) modeling results, as requested by the county.

This H&H Engineering Analysis Report was prepared to support construction of one (1) new compressor station building within the existing graveled and fenced lot of the existing Maxwell Compressor Station. The Station is located along the South Fork Hughes River. The new building is needed for DTI to house a new compressor engine, and it will be located near GPS coordinates 39.1797950367^0 N, -80.764598038^0 W, off of South Fork Hughes River Road (CR 40) in West Union, WV. The building will be constructed on existing grade (no fill) and will be approximately 42 feet wide x 42 feet long x 30 feet high. The building will be steel on a poured concrete slab that is five (5) feet thick.

The Station is located within a Zone A Special Flood Hazard Area per the Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map (FIRM) Number 54017C0225C, dated October 4, 2011. This H&H analysis establishes a design discharge (flood flow) and base flood elevations (BFEs) for both existing and proposed conditions along South Fork Hughes River in the reach of stream near the Project Site so that the impacts of the new development can be assessed. The report is included as Enclosure 1.

This study was done to accompany the original Doddridge County Floodplain Permit application that was submitted by DTI on May 20, 2015.

Should you have any questions or require further information, please do not hesitate to contact Robert Jennings at (804) 273-3737, or at Robert.H.Jennings@dom.com.

Sincerely,

Paula Hamel
Director, Gas Environmental Business Support

Hydrologic and Hydraulic Analysis
Floodplain Development Permit Application
Dominion Transmission, Inc.
2015 Maxwell Compressor Station – New Building
Southwest District, Doddridge County, West Virginia

Dear Mr. Jennings:

GAI Consultants, Inc. (GAI) is submitting this Hydrologic and Hydraulic (H&H) Analysis as an attachment to the Floodplain Development Application for the 2015 Maxwell Compressor Station – New Building Project (Project) submitted to Doddridge County on May 19, 2015. This attachment was prepared based on email correspondence from the from the Doddridge County Floodplain Manager on June 12, 2015 which indicated that the County would require an H&H Analysis of the proposed Project's impact on the existing 100-year flood elevation in order to further process the application.

This H&H Analysis was prepared to support construction of one new compressor station building within the existing graveled and fenced lot of the existing Maxwell Compressor Station (Station). The Station is located along the South Fork Hughes River. The new building is needed for Dominion Transmission, Inc. (DTI) to house a new compressor engine, and it will be located near global positioning system coordinates 39.1797950367, -80.764598038, off of South Fork of Hughes River Road (County Route [CR] 40) in West Union, West Virginia (WV). Figure 1 shows the Project location (Attachment 1). The building will be constructed on existing grade (no fill) and will be approximately 42-feet wide by 42-feet long by 30-feet high. The building will be steel on a poured concrete slab that is five-feet thick.

The Station is located within a Zone A Special Flood Hazard Area per the Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map (FIRM) Number 54017C0225C, dated October 4, 2011. Figure 2 in Attachment 1 shows the FIRM. "Zone A" classification means the floodplain delineation has been established by approximate methods and base flood elevations (BFEs) have not been determined by FEMA. The design storm for a project located in FEMA Zone A is the 100-year (one percent annual chance) flood event. This H&H Analysis establishes a design discharge (flood flow) and BFEs for both existing and proposed conditions along South Fork Hughes River in the reach of stream near the Project Site so that the impacts of the new development can be assessed.

Current Site Conditions

South Fork Hughes River flows in a north westerly direction along CR 40 through the studied reach. As shown on Figure 3, which was developed using the WV Flood Tool, the area of the proposed Project is within the FEMA approximate 100-year floodplain.

GAI conducted a field visit on June 30, 2015 to collect site-specific data for use in this H&H Analysis. Along the Project Reach, the stream's right and left banks are two- to three-feet high and are heavily

vegetated (see Photograph 1). The left floodplain extends across a relatively flat area covered with thick brush for 100 to 200 feet before reaching the fenced-in compressor station (see Photograph 2). The compressor station is then bordered by a steep hillside (see Figure 5 and Photograph 3). The right floodplain varies in width from 10 to 50 feet and is vegetated with brush and trees. It is also bordered by a steep hillside. The bottom width of the channel throughout the Project Reach is approximately nine feet, with some sections of varying widths (eight to 10 feet). The stream bed material is a silty mud with some cobbles and larger stones present.

There is an existing access road and culvert crossing located approximately 300-feet downstream of the proposed building location. The crossing consists of two four-foot diameter corrugated metal pipe culverts as shown in Photograph 4. The culverts are approximately 40 feet in length with two to three feet of cover and two feet of spacing between them. Photograph 5 shows the stream reach downstream of the existing culvert crossing and proposed building location.

Proposed Project Description

There is currently an engine oil tank (approximate dimensions eight-feet wide by 23-feet long) at the proposed compressor building location (see Photograph 6). The tank and elevated fill will be removed and replaced with the proposed compressor building, constructed on existing grade (no fill) of approximate dimensions 42-feet wide by 42-feet long by 30-feet high. The building will be steel on a poured concrete slab that is five-feet thick.

Hydrologic Analysis

The drainage area to South Fork Hughes River at the crossing is approximately 1.82 square miles (1,165 acres). The drainage area at the Site is shown on Figure 4. No stream gages or controlled reservoirs exist on South Fork Hughes River. Peak flows for the current study were computed using the United States Geological Survey (USGS) Regression (SIR 2010-5033) and National Resources Conservation Service TR-55 methods in accordance with Section 4.3.4 of the *WV Division of Highways (WVDOH) Drainage Manual*. The computer program Hydraflow Hydrographs was used to estimate flow rates for the TR-55 method.

Per Section 4.4.4.2 of the WVDOH Manual, because the drainage area is less than 10 square miles, the USGS method is not recommended to be used for design. Thus, the USGS flows (with and without the suggested prediction error) are provided for comparison only. The TR-55 flows are within 10 percent of the USGS flows (adjusted for error), and are believed to be representative of site conditions. Thus, the TR-55 100-year peak discharge of 1,192 cubic feet per second (cfs) has been adopted for design. Hydrologic calculations are provided in Attachment 3.

No flood history of the site was available for calibration. However, the results presented in this analysis are presumed to be conservative based on the South Fork Hughes River model presented in the WV Flood Tool, which uses the USGS flows (without error). Additional changes were made to the WV Flood Tool model as described in the hydraulic modeling section.

Hydraulic Modeling Procedure

Analyses of South Fork Hughes River in the vicinity of the proposed Project location were conducted using the United States Army Corps of Engineers computer program "Hydrologic Engineering Center-River Analysis System" (HEC-RAS) Version 4.1.0.

A Hydrologic Engineering Centers River Analysis System (HEC-RAS) model for South Fork Hughes River was obtained from the WV Flood Tool Site. The model was reviewed, and it does not include the existing culvert crossing at the site entrance. Thus, the WV Flood Tool model was used for Reference to obtain

the shape and approximate elevation of the floodplain in the Project area; however modifications were made to add additional detail as described below.

Seven cross-sections (two upstream of the proposed building location and five downstream) have been created for the existing conditions model. A cross section location map is provided in Attachment 4-Hydraulic Calculations. The general shape of each cross section was determined from ten foot contours derived from the WV Digital Elevation Models (DEM) and the WV Flood Tool model, and supplemented with field measurement of channel geometry. The water surface elevations of the existing and proposed models converge within the studied reach both upstream and downstream of the crossing.

The proposed model is identical to the existing conditions model in all locations except for the modifications to the obstructions at Section 46324.2. The proposed building, along with existing buildings and structures were modeled as obstructions in the HEC-RAS Geometry data. The existing culvert downstream of the proposed building was modeled using the culvert data editor.

Results

The table below shows the predicted 100-year flood elevations along South Fork Hughes River for the Existing and Proposed Project Models. The proposed building is modeled by the obstruction in Cross Section 46324.2.

Predicted 100-Year Water Surface Elevations (feet, NGVD)

Cross Section	Existing Conditions	Proposed Conditions	Difference (Proposed - Existing)
45723.6	916.04	916.04	0.00
45851.4	920.10	920.10	0.00
46014.1	924.55	924.55	0.00
46080.0	Existing Culvert Crossing		
46087.4	925.52	925.52	0.00
46324.2	925.65	925.65	0.00
46405.6	925.63	925.63	0.00
46468.0	925.82	925.82	0.00

For the 100-year event, the Proposed Project Model does not predict an increase in water surface elevation or velocity above the Existing Conditions Model. This result can be reasonably expected as the calculated flood depths at the proposed building location are relatively shallow, there is an existing obstruction to be replaced by the proposed building, and the proposed building is generally in the shadow of other station features with respect to flow direction.

Closure

Analyses have been performed to identify and quantify potential effects of the proposed Project on 100-year flood levels. The analyses indicate that the proposed Project will not increase 100-year flood levels by more than one foot, upstream, or downstream of the Project site in the studied reach. Thus, the Project is in compliance with Article IV, Section 4.3 of the Doddridge County Floodplain Ordinance.

The analyses and findings presented in this letter are based on site topography (ten-foot contours derived from WV DEM (USGS and SAMB, 2005)), a GAI field view, and Project mapping provided by DTI. GAI has relied upon this information to model the impact of the proposed Project on 100-year flood

levels. Should conditions or the proposed work change from as described herein, GAI requests the opportunity to review, and if applicable, revise its findings.

GAI appreciates your review of this information. Should you have any questions or require additional information, please feel free to contact either Mr. Derek Medved or Mr. Shane Fisher at 412-476-2000, extension 1437 or 304-808-6680, extension 2306, respectively. We can also be reached via email at d.medved@gaiconsultants.com or s.fisher@gaiconsultants.com.

Sincerely,

GAI Consultants, Inc.

Subject: Dominion – 2015 Maxwell Compressor Station-Hydrologic Calculations
By: THOMAMT Date: 07/09/2015 Project #: C141803.36
Chkd By: BERKEME Date: 07/09/2015 Sheet #: _____ of _____

OBJECTIVE:

This analysis will estimate peak flow for the 100-year storm event for a floodplain analysis in Doddridge County, West Virginia.

REFERENCES:

1. West Virginia Department of Transportation, Division of Highways (WVDOH), Drainage Manual, 3rd Edition with May 2, 2012 Revisions.

6. Hyrdaflow Hydrographs by InteliSOLVE, Version 8.0.0.3, 2004.

FLOOD INFORMATION:

The Project is located in Federal Emergency Management Agency (FEMA) Zone A, which is defined as an area where approximate methods are used to determine the 100-year flood boundaries and no detailed hydraulic analysis or Base Flood Elevations (BFEs) are determined.

HYDROLOGIC ANALYSIS:

The drainage area to South Fork Hughes River at the Crossing is approximately 1.82 square miles (1,163 acres). The drainage area and project site are shown on the Drainage Area Map (sheet 3).

No stream gages exist on South Fork Hughes River. Peak flows for the current study are computed using the USGS Regression (SIR 2010-5033) and NRCS TR-55 methods in accordance with Section 4.3.4 of the WVDOH Drainage Manual. The computer program Hydraflow Hydrographs was used to estimate flow rates for the TR-55 method.

The drainage area and time of concentration flow path are shown on Sheet 3 of this calculation set. Time of Concentration was determined using worksheet 3 from the TR-55 Manual.

INPUT DATA:

Rainfall (From NOAA Atlas 14):

2-yr, 24 hour = 2.57 in (for use in Time of Concentration Calculation)
100-yr, 24 hour = 5.17 in

Soil Types were determined to be Type A and C from the USDA Soil Map and information on Sheets 7-11. Land use was determined from the USDA mapping and aerial imagery and consists of woodlands.

Runoff Curve Number Coefficients (WVDOH Drainage Manual, Table 4-9 and 4-10)

Woods Only (Good Condition), Type C Soils = 70
Meadow, Type C Soils = 71
Meadow, Type A Soils = 30

RESULTS:

The Table below summarizes the flow rates estimated using each method. The detailed analyses can be found in the following pages.

Method	PEAK FLOWS (cfs)
	100-year
USGS Regression (Unadjusted)	834
USGS Regression (Adjusted for Error)	1,096
TR-55	1,192

Per Section 4.4.4.2 of the WVDOH Manual, because the drainage area is less than 10 square miles, the USGS method is not recommended to be used for design. Thus, the USGS flows (with and without the suggested prediction error) are provided for comparison only. The TR-55 flows are within 10% of the USGS flows adjusted for error and have been adopted for design.

[1] Precipitation frequency (PF) estimates in this table are based on frequency analysis of partial duration series (PDS).

Numbers in parenthesis are PF estimates at lower and upper bounds of the 90% confidence interval. The probability that precipitation frequency estimates (for a given duration and average recurrence interval) will be greater than the upper bound (or less than the lower bound) is 5%. Estimates at upper bounds are not checked against probable maximum precipitation (PMP) estimates and may be higher than currently valid PMP values.

Please refer to NOAA Atlas 14 document for more information.

Soil Data

Soil Information for All Uses

Soil Properties and Qualities

The Soil Properties and Qualities section includes various soil properties and qualities displayed as thematic maps with a summary table for the soil map units in the selected area of interest. A single value or rating for each map unit is generated by aggregating the interpretive ratings of individual map unit components. This aggregation process is defined for each property or quality.

Soil Qualities and Features

Soil qualities are behavior and performance attributes that are not directly measured, but are inferred from observations of dynamic conditions and from soil properties. Example soil qualities include natural drainage, and frost action. Soil features are attributes that are not directly part of the soil. Example soil features include slope and depth to restrictive layer. These features can greatly impact the use and management of the soil.

Hydrologic Soil Group

Hydrologic soil groups are based on estimates of runoff potential. Soils are assigned to one of four groups according to the rate of water infiltration when the soils are not protected by vegetation, are thoroughly wet, and receive precipitation from long-duration storms.

The soils in the United States are assigned to four groups (A, B, C, and D) and three dual classes (A/D, B/D, and C/D). The groups are defined as follows:

Group A. Soils having a high infiltration rate (low runoff potential) when thoroughly wet. These consist mainly of deep, well drained to excessively drained sands or gravelly sands. These soils have a high rate of water transmission.

Group B. Soils having a moderate infiltration rate when thoroughly wet. These consist chiefly of moderately deep or deep, moderately well drained or well drained soils that have moderately fine texture to moderately coarse texture. These soils have a moderate rate of water transmission.

Group C. Soils having a slow infiltration rate when thoroughly wet. These consist chiefly of soils having a layer that impedes the downward movement of water or soils of moderately fine texture or fine texture. These soils have a slow rate of water transmission.

Group D. Soils having a very slow infiltration rate (high runoff potential) when thoroughly wet. These consist chiefly of clays that have a high shrink-swell potential, soils that have a high water table, soils that have a claypan or clay layer at or near the surface, and soils that are shallow over nearly impervious material. These soils have a very slow rate of water transmission.

If a soil is assigned to a dual hydrologic group (A/D, B/D, or C/D), the first letter is for drained areas and the second is for undrained areas. Only the soils that in their natural condition are in group D are assigned to dual classes.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24,000.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL: http://websoilsurvey.nrcs.usda.gov
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Doddridge County, West Virginia
Survey Area Data: Version 10, Sep 25, 2014

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Oct 8, 2011—Oct 25, 2011

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

OBJECTIVE:

Create the existing and proposed conditions hydraulic models in HEC-RAS for South Fork Hughes River upstream and downstream of the project area.

REFERENCES:

1. HEC-RAS Version 4.1.0, U.S. Army Corps of Engineers, January 2010.
2. Hydrology Calculations –Dominion- 2015 Maxwell Compressor Station- New Building
3. Project mapping and topographic information.
4. Field view notes, 06/30/2015.

METHOD:

HEC-RAS cross sections for the model are developed from a combination of project mapping and field measurement. Hydraulic conditions, including Manning's n values, contraction and expansion coefficients, stream cross section geometry, and culvert modeling methodologies were determined based on field observations, measurement, and engineering judgment and are summarized in this calculation set. Estimated flows are simulated in HEC-RAS and the existing and proposed water surface elevations and velocities are calculated at various locations around the project site.

CROSS SECTIONS:

Seven cross sections (two upstream of the proposed crossing location and five downstream) have been created for the existing conditions model. A cross section location map is provided on sheet 3. The general shape of each cross section was determined from contour interval mapping and field measurement. Locations of existing and proposed structures included in the model were based on mapping provided by Dominion and field verification.

HYDROLOGIC CONDITIONS:

Flow rates at the project site were evaluated using the United States Geological Survey (USGS) method, Scientific Investigations Report (SIR) 2010-5033 and the United States Department of Agriculture (USDA) National Resources Conservation Service (NRCS) TR-55 Method. The TR-55 100-year peak discharge of 1,192 cfs was adopted for the modeling.

BOUNDARY CONDITIONS:

The boundary condition selected for the model was a normal depth at the downstream limit of the reach. The slope was originally estimated to be the slope of the stream bed, and after the first iteration of the model it was adjusted to reflect the slope of the 100-year water surface elevation at the downstream modeling limit (approximately 0.02 ft/ft).

By: BerkeME Date: 07/09/2015 Project #: C141803.36
Chkd By: ThomaMT Date: 07/13/2015 Sheet #: _____ of _____

gai consultants

HYDRAULIC CONDITIONS:

Information concerning the hydraulic conditions was noted during the project's field view. The stream consists of silty mud. The banks are heavily vegetated and the stream has riffles, pools, and several small meanders throughout the reach. Based on observations taken in the field, Manning's n values were estimated to be approximately 0.045 for the channel. The floodplains were vegetated with heavy brush, and a Manning's n of 0.10 was selected for these areas. The existing compressor station is a fenced gravel area, and a Manning's n of 0.075 was selected for the fenced gravel areas due to the fence's ability to become blocked with debris. The existing buildings and structures shown on Figure 5 were modeled as obstructions in the cross section data editor.

The existing culverts (two 4-foot diameter Corrugated Metal Pipe Culverts) and access road crossing downstream of the proposed building was modeled using the HEC-RAS culvert data editor. In the HEC-RAS culvert data editor, an entrance coefficient of 0.9 was used to represent a pipe projecting from fill and Chart # 2 (Corrugated Metal Pipe Culvert) and Scale # 3 (Pipe Projecting from fill) were selected. Expansion contraction coefficients were increased to 0.3 and 0.5 at the upstream and downstream bounding sections, and ineffective flow areas were set to reflect the flow obstruction caused by the proposed access road. Stations for the ineffective flow areas were determined by using an expansion and contraction ratio of 1:1.

PROPOSED CONDITIONS:

There is currently an existing engine oil tank on fill, at the proposed compressor building location (See Figure 5 and Cross Section 46324.2). In the hydraulic model, the two smaller obstructions representing the existing tank and other structure were modified to represent one larger obstruction for the proposed 42' x 42' building. The Proposed Conditions hydraulic model is identical to the Existing Conditions model in all other locations.

RESULTS:

The results of the existing conditions HEC-RAS Hydraulic model are included at the end of this calculation. The proposed structure shows no increase in 100-year water surface elevations or velocity over existing conditions. Information provided includes the summary table, culvert output table, the profile of South Fork Hughes River within the studied reach, and the cross section plots for the entire model.

The HEC-RAS notes and warning messages for the model have been reviewed and considered. Input data has been checked for consistency with field conditions and design experience, as has the solutions provided by HEC-RAS.

PROJECT DATA
Project Title: Maxwell Compressor Station
Project File : SFHGHSRVR.prj
Run Date and Time: 7/13/2015 12:03:11 PM

Project in English units

PLAN DATA

Plan Title: Existing Conditions
Plan File : z:\Energy\2014\C141803.36 - Dom - Maxwell Station Hyd\Working Docs\Hydraulics\HEC-RAS\sfhghsrvr\sfhghsrvr_HEC_RAS\SFHGHSRVR.p02

Geometry Title: Existing Conditions
Geometry File : z:\Energy\2014\C141803.36 - Dom - Maxwell Station Hyd\Working Docs\Hydraulics\HEC-RAS\sfhghsrvr\sfhghsrvr_HEC_RAS\SFHGHSRVR.g02

Flow Title : TR-55 Flows
Flow File : z:\Energy\2014\C141803.36 - Dom - Maxwell Station Hyd\Working Docs\Hydraulics\HEC-RAS\sfhghsrvr\sfhghsrvr_HEC_RAS\SFHGHSRVR.f02

Plan Summary Information:

Number of:	Cross Sections	= 7	Multiple Openings	=	0
	Culverts	= 1	Inline Structures	=	0
	Bridges	= 0	Lateral Structures	=	0

Computational Information

Water surface calculation tolerance	= 0.01
Critical depth calculation tolerance	= 0.01
Maximum number of iterations	= 20
Maximum difference tolerance	= 0.3
Flow tolerance factor	= 0.001

Computation Options
Critical depth computed only where necessary
Conveyance Calculation Method: At breaks in n values only
Friction Slope Method: Average Conveyance
Computational Flow Regime: Subcritical Flow

FLOW DATA

Flow Title: TR-55 Flows
Flow File : z:\Energy\2014\C141803.36 - Dom - Maxwell Station Hyd\Working Docs\Hydraulics\HEC-RAS\sfhghsrvr\sfhghsrvr_HEC_RAS\SFHGHSRVR.f02

Flow File : z:\Energy\2014\C141803.36 - Dom - Maxwell Station Hyd\Working Docs\Hydraulics\HEC-RAS\sfhghsrvr\sfhghsrvr_HEC_RAS\SFHGHSRVR.f02

Plan Summary Information:

Number of:	Cross Sections	= 7	Multiple Openings	=	0
	Culverts	= 1	Inline Structures	=	0
	Bridges	= 0	Lateral Structures	=	0

Computational Information

Water surface calculation tolerance	= 0.01
Critical depth calculation tolerance	= 0.01
Maximum number of iterations	= 20
Maximum difference tolerance	= 0.3
Flow tolerance factor	= 0.001

Computation Options
Critical depth computed only where necessary
Conveyance Calculation Method: At breaks in n values only
Friction Slope Method: Average Conveyance
Computational Flow Regime: Subcritical Flow

DODDRIDGE COUNTY FLOODPLAIN
DEVELOPMENT PERMIT APPLICATION

DODDRIDGE COUNTY
FLOODPLAIN DEVELOPMENT PERMIT APPLICATION

SECTION 1: GENERAL PROVISIONS (APPLICANT TO READ AND SIGN)

1. No work may start until a permit is issued.
2. The permit may be revoked if any false statements are made herein.
3. If revoked, all work must cease until permit is re-issued.
4. Development shall not be used or occupied until a Certificate of Compliance is issued.
5. The permit will expire if no work is commenced within six months of issuance.
6. Applicant is hereby informed that other permits may be required to fulfill local, state, and federal requirements.
7. Applicant hereby gives consent to the Floodplain Administrator/Manager or his/her representative to make inspections to verify compliance.
8. I THE APPLICANT CERTIFY THAT ALL STATEMENTS HEREIN AND IN ATTACHMENTS TO THIS APPLICATION ARE, TO THE BEST OF MY KNOWLEDGE, TRUE AND ACCURATE.

APPLICANT'S SIGNATURE 
DATE 5-20-15

SECTION 2: PROPOSED DEVELOPMENT (TO BE COMPLETED BY APPLICANT).

IF THE APPLICANT IS NOT A NATURAL PERSON, THE NAME, ADDRESS, AND TELEPHONE NUMBER OF A NATURAL PERSON WHO SHALL BE APPOINTED BY THE APPLICANT TO RECEIVE NOTICE PURSUANT TO ANY PROVISION OF THE CURRENT DODDRIDGE COUNTY FLOODPLAIN ORDINANCE.

APPLICANT'S NAME: Dominion Transmission, Inc.
ADDRESS: 5000 Dominion Boulevard, Glen Allen, VA 23060
TELEPHONE NUMBER: (804) 273-3737

CONTRACTOR NAME: LR Builds, Inc. – Sheldon E. Raber, VP
ADDRESS: One Railroad Street, Shinnston, WV 26431
TELEPHONE # (304) 592-2083
WV CONTRACTOR LICENCE # WV000081

ENGINEER'S NAME: Derek Ingle
ADDRESS: 335 US Highway 33W, Weston, WV 26452
TELEHONE NUMBER: (304) 269-6990

PROJECT LOCATION: GPS Coordinates: 39.1797950367, -80.7624598038
PHYSICAL ADDRESS: South Fork of Hughes River Road (CR 40) in West Union, West Virginia, 26456
NAME OF SURFACE OWNER/OWNERS (IF NOT THE APPLICANT): Dominion Transmission, Inc.
ADDRESS OF SURFACE OWNER/OWNERS (IF NOT THE APPLICANT):
445 West Main St, Clarksburg, WV 26301

DISTRICT: Southwest District
LAND BOOK DESCRIPTION: 5.4 acres & 0.89 acres
DEED BOOK REFERENCE: 5.4 acres – 83/272; 0.89 acres – 162/325

TAX MAP REFERENCE: Doddridge County – Southwest District – Map 10; Parcel Number Not Available
EXISTING BUILDINGS/USES OF PROPERTY: Existing DTI Compressor Station (Maxwell Station); One compressor building and associated above-ground facilities on-site
NAME OF AT LEAST ONE ADULT RESIDING IN EACH RESIDENCE LOCATED UPON THE SUBJECT PROPERTY N/A
ADDRESS OF AT LEAST ONE ADULT RESIDING IN EACH RESIDENCE LOCATED UPON THE SUBJECT PROPERTY N/A

To avoid delay in processing the application, please provide enough information to easily identify the project location.

DESCRIPTION OF WORK (CHECK ALL APPLICABLE BOXES)

A. STRUCTURAL DEVELOPMENT

ACTIVITY		STRUCTURAL TYPE	
[X]	***New Structure***	[]	Residential (1 – 4 Family)
[]	Addition	[]	Residential (more than 4 Family)
[]	Alteration	[]	Non-residential (floodproofing)
[]	Relocation	[]	Combined Use (res. & com.)
[]	Demolition	[]	Replacement
[]	Manufactured/Mobil Home	[X]	***Industrial (Compressor Station Building)***

B. OTHER DEVELOPMENT ACTIVITIES:

[] Fill [] Mining [] Drilling [] Pipelining
[X] ***Grading***
[] Excavation (except for STRUCTURAL DEVELOPMENT checked above)
[] Watercourse Alteration (including dredging and channel modification)
[] Drainage Improvements (including culvert work)
[] Road, Street, or Bridge Construction
[] Subdivision (including new expansion)
[] Individual Water or Sewer System
[] Other (please specify)

C. STANDARD SITE PLAN OR SKETCH

1. SUBMIT ALL STANDARD SITE PLANS, IF ANY HAVE BEEN PREPARED (ENGINEERING PLANS MUST BE SIGNED AND SEALED).
2. IF STANDARD SITE PLANS HAVE NOT BEEN PREPARED:
   SKETCH ON A SEPARATE 8 ½ X 11 INCH SHEET OF PAPER THE SHAPE AND LOCATION OF THE LOT. SHOW THE LOCATION OF THE INTENDED CONSTRUCTION OR LAND USE INDICATING BUILDING SETBACKS, SIZE & HEIGHT. IDENTIFY EXISTING BUILDINGS, STRUCTURES OR LAND USES ON THE PROPERTY.
3. SIGN AND DATE THE SKETCH.

ACTUAL TOTAL CONSTRUCTION COSTS OF THE COMPLETE DEVELOPMENT/ PROPOSED CONSTRUCTION PROJECT WITHIN THE FLOODPLAIN $ 245,055.00

D. ADJACENT AND/OR AFFECTED LANDOWNERS:

1. NAME AND ADDRESS OF ALL OWNERS OF SURFACE TRACTS ADJACENT TO THE AREA OF THE SURFACE TRACT (UP & DOWN STREAM) UPON WHICH THE PROPOSED ACTIVITY WILL OCCUR AND ALL OTHER SURFACE OWNERS UP & DOWN STREAM) WHO OWN PROPERTY THAT MAY BE AFFECTED BY FLOODING AS IS DEMONSTRATED BY A FLOODPLAIN STUDY OR SURVEY (IF ONE HAS BEEN COMPLETED).

NAME: I.L (Ike) Morris **ADDRESS:** P.O. Box 397, Glenville, WV 26351

2. NAME AND ADDRESS OF AT LEAST ONE ADULT RESIDING IN EACH RESIDENCE LOCATED UPON ANY ADJACENT PROPERTY AT THE TIME THE FLOODPLAIN PERMIT APPLICATION IS FILED AND THE NAME AND ADDRESS OF AT LEAST ONE ADULT RESIDING IN ANY HOME ON ANY PROPERTY THAT MAY BE AFFECTED BY FLOODING AS IS DEMONSTRATED BY A FLOODPLAIN STUDY OR SURVEY.

NAME: Same as Above NAME:_____
ADDRESS:_____ ADDRESS:_____
_____ _____

E. CONFIRMATION FORM

THE APPLICANT ACKNOWLEDGES, AGREES, AND CONFIRMS THAT HE/IT WILL PAY WITHIN 30 DAYS OF RECEIPT OF INVOICE BY THE COUNTY FOR ALL EXPENSES RELATIVE TO THE PERMIT APPLICATION PROCESS GREATER THAN THE REQUIRED DEPOSIT FOR EXPENSES INCLUDING:

(A) PERSONAL SERVICE OF PROCESS BY THE DODDRIDGE COUNTY SHERIFF AT THE RATES PERMITTED BY LAW FOR SUCH SERVICE.
(B) SERVICE BY CERTIFIED MAIL RETURN RECEIPT REQUESTED.
(C) PUBLICATION.
(D) COURT REPORTING SERVICES AT ANY HEARINGS REQUESTED BY THE APPLICANT.
(E) CONSULTANTS AND/OR HEARING EXPERTS UTILIZED BY DODDRIDGE COUNTY FLOODPLAIN ADMINISTRATOR/MANAGER OR FLOODPLAIN APPEALS BOARD FOR REVIEW OF MATERIALS AND/OR TESTIMONY REGARDING THE EFFICACY OF GRANTING OR DENYING THE APPLICANT'S FLOODPLAIN PERMIT.

NAME (PRINT):_____

SIGNATURE:_____ DATE:_____

After completing SECTION 2, APPLICANT should submit form and fees to Clerk of Doddridge County Court or his/her representative for review.

SECTION 3: FLOODPLAIN DETERMINATION (to be completed by Floodplain Administrator/Manager or his/her representative)

THE PROPOSED DEVELOPMENT:

THE PROPOSED DEVELOPMENT IS LOCATED ON:
FIRM Panel:_____
Dated:_____
_____

[] Is NOT located in a Specific Flood Hazard Area (Notify applicant that the application review is complete and NO FLOOPLAIN DEVELOPMENT PERMIT IS REQUIRED).

[] Is located in Special Flood Hazard Area.
FIRM zone designation_____
100-Year flood elevation is _____NGVD .
Stream name _____.
Profile # _____.

[] Unavailable

[] The proposed development is located in a floodway.

[] See section 4 for additional instructions.

SIGNED_____ DATE_____

SECTION 4: ADDITIONAL INFORMATION REQUIRED FOR DEVELOPMENT IN SPECIAL FLOOD HAZARD AREA (To be completed by Floodplain Administrator/Manager or his/her representative)

The applicant must submit the documents checked below before the application can be processed.

[] A plan showing the location of all existing structures, water bodies, adjacent roads and proposed development.

[] Development plans, drawn to scale, and specifications, including where applicable: details for anchoring structures, storage tanks, proposed elevation of lowest floor, (including basement or crawl space), types of water resistant materials used below the first floor, details of flood proofing of utilities located below the first floor and details of enclosures below the first floor. Also_____
_____

[] Subdivision or other development plans (If the subdivision or development exceeds 10 lots or 2 acres, whichever is the lesser, the applicant must provide 100-year flood elevations if they are not otherwise available).

[] Plans showing the extent of watercourse relocation and/or landform alterations.

[] Top of new fill elevation _____Ft. NGVD.
For floodproofing structures applicant must attach certification from registered engineer or architect.

[] Certification from a registered engineer that the proposed activity in a regulatory floodway will not result in any increase in the height of the 100-year flood. A copy of all data and calculations supporting this finding must also be submitted.

[] Manufactured homes located in a Flood Hazard Area must have a West Virginia Contractor's License and a Manufactured Home Installation License as required by the Federal Emergency Management Agency (FEMA).

[] Other:_____

SECTION 5: PERMIT DETERMINATION (To be completed by Floodplain Administrator/Manager or his/her representative)

I have determined that the proposed activity (type is or is not) in conformance with provisions of the Floodplain Ordinance adopted by the County Commission of Doddridge County on May 21, 2013. The permit is issued subject to the conditions attached to and made part of this permit.

SIGNED_____DATE_____

If the Floodplain Administrator/Manager found that the above was not in conformance with the provisions of the Doddridge County Floodplain Ordinance and/or denied that application, the applicant may appeal.

APPEALS: Appealed to the County Commission of Doddridge County? [] Yes {} No
Hearing Date:_____
County Commission Decision - Approved [] Yes [] No

CONDITIONS:_____
_____
_____

SECTION 6: AS-BUILT ELEVATIONS (To be submitted by APPLICANT before Certificate of Compliance is issued). ***As-Build Elevations will be provided after the building has been constructed.***
